

# HONEY BADGER BUSINESS

Business Performance - Simple Owner View

## Purpose

Business Performance should be the heartbeat of Honey Badger. An ordinary business owner should be able to open it and understand within seconds whether the business is doing well, needs attention, or is performing poorly - without needing accounting knowledge.

|                 |                                                                                                       |
|-----------------|-------------------------------------------------------------------------------------------------------|
| GOOD            | Business is healthy. Sales/profit are positive and key areas are under control.                       |
| NEEDS ATTENTION | Something important is weakening, for example falling sales, rising expenses or low stock.            |
| POOR            | The business has serious problems that need action, such as losses or strongly declining performance. |

## What the owner should see first

- 1. Overall Business Health:** GOOD, NEEDS ATTENTION or POOR.
- 2. Growth:** clearly say whether the business is growing, stable or declining compared with the previous period.
- 3. Plain-language explanation:** explain why, for example: "Your profit improved this month" or "Expenses increased and need attention."
- 4. Important actions:** show only the issues that need the owner's attention, such as low stock, high expenses or falling profit.

## Detailed information underneath

Keep the full figures available for owners who want more detail: Product Revenue, Cost of Goods Sold, Gross Profit, Expenses, Salaries, Estimated Net Profit/Loss, Stock Value, Low/Out-of-Stock products, MT/Empties, Payment Charges, Cash/Card/Transfer totals, Number of Sales, Average Sale Value and cancelled/failed sales where applicable.

## Important calculation rule

Honey Badger must not judge business health from sales revenue alone. It must use the available real business records. MT/empties and payment charges must remain separate and must not be incorrectly counted as product revenue or product profit.

## Design principle

**Simple first. Details second.** Use clear words, short explanations and easy visual status indicators. The goal is peace of mind: the owner should quickly know what is happening, why it is happening and what needs attention.
